PROFESSIONAL SUMMARY

Data Engineer / SQL Developer with 2+ years of experience in SQL development, ETL processes, backend data integrations, and analytics-ready dataset creation using SQL Server, T-SQL, and SSIS. Experienced in query optimization, data transformation, API data ingestion, and database performance tuning. Currently pursuing a Master's in Data Science and Artificial Intelligence while building expertise in scalable data pipelines and cloud-based data solutions.

TECHNICAL SKILLS

- Databases:
 - Microsoft SQL Server, MySQL
- Programming & Query Languages:
 - SQL, T-SQL, Python, JavaScript, PHP
- Data Engineering & ETL:
 - ETL/ELT Development, SSIS, Data Extraction, Data Transformation, Data Loading, Incremental Loading, API Data Integration, Data Validation
- Database & Warehousing Concepts:
 - Stored Procedures, Views, Joins, Query Optimization, Indexing, Execution Plan Analysis, Relational Database Design, Normalization, Star Schema, Fact & Dimension Modeling
- Tools & Technologies:
 - Git, GitHub, REST APIs, Node.js, Express.js

PROFESSIONAL EXPERIENCE

Junior Software Engineer – Data-Focused Backend Role
TECH 84

May 2024 – Present
Colombo

- Designed and optimized SQL Server databases for transactional and reporting systems.
- Developed complex T-SQL queries, stored procedures, and views for analytics and operational reporting.
- Built and maintained analytics-ready datasets to support business intelligence and reporting requirements.
- Performed query optimization, indexing, and execution plan analysis to improve SQL performance and reduce report execution times.
- Supported ETL-style data ingestion and transformation processes from REST APIs into relational databases.
- Ensured data quality, consistency, and integrity across integrated systems.
- Collaborated with business and development teams to gather data requirements and implement reporting solutions.
- Assisted in backend data integration and database performance troubleshooting.

EDUCATION

Master of Science in Data Science and Artificial Intelligence

University of Sri Jayewardenepura

2026 - Present

Expected 2028

Bachelor of Information Technology

University of Colombo School of Computing

2025

DATA ENGINEERING PROJECTS (PERSONAL)

SFA Data Warehouse

Project Repo: https://github.com/nadun-k-s/Sals_Force_ETL.git

Developed an end-to-end ETL pipeline simulating a Sales Force Automation (SFA) system, transforming raw operational data into a structured data warehouse for analytics and reporting.

Project Highlights:

- Designed a layered ETL architecture (Staging → Transform → Dimension → Fact) for scalable and maintainable data processing.
- Built pipelines to extract, cleanse, and transform raw sales data into analytics-ready datasets.
- Implemented incremental loading using control tables to process only new and updated records.
- Applied Slowly Changing Dimension (SCD Type 2) to maintain historical data tracking.
- Performed surrogate key mapping using Lookup transformations to link fact and dimension tables.
- Ensured data quality by handling null values, invalid records, and missing dimensions using default keys.
- Designed a star schema with a centralized Fact_Sales table and multiple dimension tables.
- Optimized performance using parallel data flows, Full Cache lookups, and SQL-based transformations.

Technologies Used - SQL Server, SSIS, T-SQL, Star Schema Modeling
